

Satendra Gupta

+91-9129066771 | satendra.23bai11142@vitbhopal.ac.in | linkedin.com/in/satendravgupta/ | github.com/satendravrion

Professional Summary

AI/ML Engineering student with a strong foundation in data structures, algorithms, and ensemble learning. Proven track record of architecting end-to-end machine learning pipelines, with specific expertise in computer vision and generative AI. Adept at bridging the gap between deep learning research and production-ready systems by deploying optimized models into scalable full-stack environments.

Education

VIT Bhopal University

B.Tech, Computer Science (AI & ML); CGPA: 7.51

Sehore, Madhya Pradesh

Aug. 2023 – May 2027

Technical Skills

Languages: Python, Java, C++, JavaScript, SQL

AI/ML: TensorFlow, PyTorch, Scikit-learn, Computer Vision, NLP, Ensemble Learning

Generative AI: RAG, Prompt Engineering, LangChain, Hugging Face

Data & Analytics: Pandas, NumPy, Power BI, EDA

Web & Databases: Vue.js, Nuxt.js, React, REST APIs, MySQL, MongoDB

DevOps/Cloud: Git, GitHub, Docker, CI/CD, AWS/Azure basics, Linux

Core CS: Data Structures & Algorithms, System Design, Performance Testing

Experience

AI/ML & Software Engineering Intern

May 2025 – Jul. 2025

MPOnline

Remote

- Designed and deployed full-stack applications by integrating SQL-backed RESTful APIs with robust ML pipelines and ensemble learning models.
- Trained and optimized deep learning models (CV, NLP) using TensorFlow and PyTorch, improving performance through PCA and rigorous hyperparameter tuning.
- Streamlined the SDLC by implementing unit testing, deploying services to cloud infrastructure, and automating CI/CD workflows using n8n.

Projects

Mail-Expert-AI | Kotlin, Android Studio

GitHub

- * Architected an intelligent Android application (`com.example.MailExpertAI`) using Kotlin to [describe the primary problem this AI solves for users].
- * Engineered the core application logic and UI components within `MainActivity.kt`, integrating [mention the specific LLM or AI API used] to process [mention data type, e.g., incoming emails or drafts].
- * Optimized application performance and [mention a specific metric, e.g., reduced API latency by X% or improved response generation speed by Y%].

Real-Time AI Voice Chat | Python, LLMs, Docker, JavaScript

Aug. 2026

- Developed an interactive application enabling natural, spoken conversations with a Large Language Model (LLM) using voice inputs.
- Engineered a near real-time pipeline to process user audio and synthesize AI spoken responses.
- Containerized the application environment using Docker and Docker Compose for consistent deployment.

Certifications

Google IT Support Certificate – Google | Introduction to Generative AI – Google Cloud | Graphs Camp completion Certificate – Algo Univerity
